SKILLS

- **HTML**
- **CSS**
- **JavaScript**
- **React.js**

FrameWorks:
- **Bootstrap**
- **TailwindCss**

- **Responsive Design**
- **GitHub**

OBJECTIVE:

I'm a super enthusiastic Computer Science graduate, eager to land a frontend internship. When it comes to HTML, CSS, JavaScript, and React.js, I'm all in—I love creating magic with these languages. I have a real talent for using tools like Tailwind CSS and Bootstrap to craft websites that not only look amazing but also function seamlessly on any device. I'm really excited about the idea of diving into interesting projects, soaking up knowledge, and getting some hands-on experience in a real-world setting.

PROJECTS:

Frontend Projects Using React and TailwindCss:

1.Portfolio Website:
I created my portfolio site using React and Tailwind CSS. It's made to look great and work well on any device. I added cool interactive bits to show off my achievements. Plus, I teamed up with backend folks to make sure everything fits together smoothly.

2.Online Food Ordering System:
With React and Tailwind CSS, I built the front part of a food ordering site. People can easily check out menus, place orders, and pay online. It was crucial to make sure the front and back ends worked seamlessly together.

3.E-commerce Platform:
I used React and Tailwind CSS to make a frontend for an online store. It's got all the essentials like product displays, a shopping cart, and a safe checkout process. I teamed up with designers to make sure it's easy to use and looks great.

4.Social Media Application:
I took charge of building the front end of a social media app using React and Tailwind CSS. I added stuff like user profiles, news feeds, and messaging features. Making sure everything talked nicely with the backend was key for a smooth user experience.

5.Product-List Application:
I created a neat frontend app using React and Tailwind CSS that shows off different products. People can easily browse, filter, and sort through them, and check out all the details. I teamed up with the backend folks to make sure we're pulling in the right data and that everything works smoothly together, making it a seamless experience for users.

More Projects 15+ :
- **To-Do List**
- **Currency Converter**

Additional Skills

- **Communication skill**
- **Problem Solving**
- **Leadership**
- **WordPress**
- **Ms Office**

- **Background Changer**

Frontend Projects Using Html, Css and JavaScript:

1.Portfolio Website:
Developed using HTML, CSS, and JavaScript. Designed for visual engagement and responsiveness. Integrated interactive elements for showcasing skills and projects. Collaborated with backend developers for seamless integration.

2.Online Food Ordering System:
Frontend development using HTML, CSS, and JavaScript. Enabled users to browse menus, place orders, and complete payments. Ensured smooth integration with backend functionalities for an intuitive ordering process.

3.E-commerce Platform:
Created frontend using HTML, CSS, and JavaScript. Implemented features like product listings, cart management, and secure checkout. Collaborated with UX/UI designers for intuitive interface design.

4.Social Media Application:
Led frontend development using HTML, CSS, and JavaScript. Implemented user interface components such as profiles, news feeds, and messaging. Collaborated with backend developers for efficient data interaction and enhanced user experience.
